GOOD THINGS HAPPENING

ILLUMINATING INFORMATION ON ELECTRIC SERVICE

From left: Nicola Coddington of Abundant Efficiency, Dobbs Ferry; Europa McGovern, planner and Clean Energy Communities coordinator for Hudson Valley Regional Council; Stephen Wemple, general manager, Utility of the Future, Con Edison; and Dan Welsh.

Westchester Power Program Director **Dan Welsh** recently spoke at a town of Greenburgh meeting at the **Greenburgh Nature Center**, updating town officials and residents about the cost and environmental benefits of participating in New York State's first **Community Choice Aggregation** plan. The Westchester Power program was initiated and implemented by **Sustainable Westchester Inc.** The community-based, bulk-energy purchasing program is designed to provide competitive costs and increase the use of renewable energy in Westchester County.

Greenburgh is listed among the 20 municipalities that signed on with Sustainable Westchester and are be-

ing serviced by Westchester Power. The 20 participating governments brought more than 110,000 Westchester electric customers to the aggregator, representing more than 40 percent of the county population.

Consolidated Edison had been supplying electricity to Westchester Power's customers through **ConEdison Solutions**, its energy service company operation. ConEdison Solutions was sold to **Constellation New Energy Inc.**, which is owned by **Exelon**. Westchester Power recently notified its customers that the sale would have no actual change or impact on its program and customers will continue to receive the same rates and services.
